Type J PVC Isolé Mylar Cribed Thermocouple Câble / Fil (IEC)

Le câble compensateur ressemble a la caractéristique thermoélectrique du thermocouple concerné sur une plage de température ambiante limitée, de 0 ° a 80 ° C en général. Étant donné que ces câbles sont fabriqués a partir de matériaux a faible cout, des économies de couts peuvent etre réalisées sur les installations de l'usine par rapport a l'exécution d'un véritable câble d'extension de thermocouple.
